

## SmartConnect door

### The smart video door intercom system

#### Description

The FUHR **SmartConnect door** video door intercom makes classic (video) door intercom systems superfluous. Via tablet or smartphone, you can connect with your visitors anytime, anywhere, even when you are away from home.

The SmartHome server is located in the small, discreet door module – this opens the door, switches lights and manages users and access authorisations. Without complex cabling and expensive analysis and control units, **SmartConnect door** offers the end user and the door manufacturer numerous benefits that are unique in this combination.

#### Benefits for fabricators

- Added value: The door element is supplemented by an additional, intelligent component, making it unnecessary to consider other assembly systems.
- Equipment and testing of the whole door element and the video door intercom system in the door construction is possible.
- The compact design allows different types of installation in all door materials. The simple design does not affect the door's appearance.
- Profile frame mounting or panel mounting: Depth and width of the module correspond to the installation dimensions of, for example the FUHR fingerprint scanner.
- Option for flush mounting beside the door for retrofitting.
- Simple assembly in the door element – no inspection openings or complex cabling.
- Only 12 V power needed. Door is opened via radio signal, in conjunction with the FUHR smart radio module.

## ( SmartConnect door

### More benefits for fabricators

- Integrated energy storage to use the module, also in doors with spring-loaded contacts, without cable run.
- Connection for external doorbell available.
- Multiple doorbells as well as on-site doorbells can be connected via an optional coupling module.
- Combination with FUHR motorised locks offers particularly simple installation and commissioning, as well as a wide range of functions.
- **SmartConnect door** is also compatible with all commercially available motorised locks and electrical door openers.

### Multifaceted mounting methods

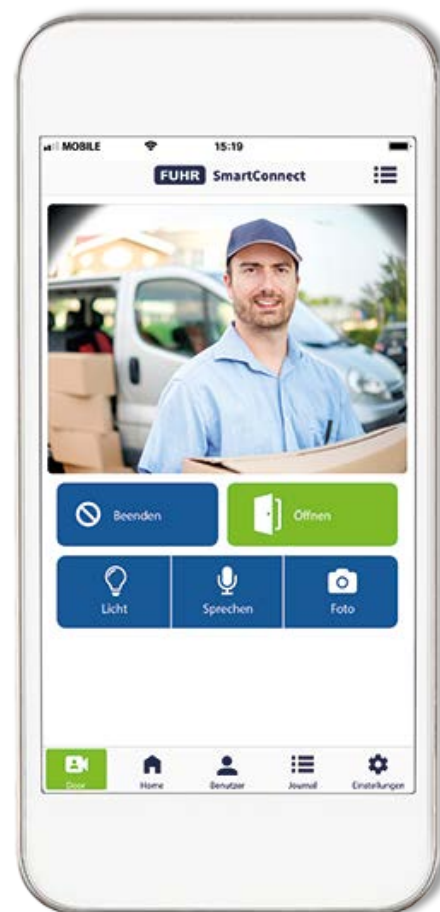

February 2019

## SmartConnect door

### Benefits for end user

- Intuitive handling of the door intercom system via app and use of commercially available mobile devices.
- Smart alternative for products which are expensive and difficult to install.
- Location-independent interaction with visitors: A ring at the front door is sent via push notification to authorised mobile devices.
- Many features available: reject, open, speak, night light and take a photograph.
- Additional security: This creates the impression to the person at the door that you are at home and provides a constant overview of who is seeking to gain access to the building.
- Integrated doorbell and optional connection for existing on-site door bells.
- PIN keypad and bell button included.
- Minimal set-up work, because of its integration in the home Wifi.
- Complete SmartHome functionality of the popular FUHR **SmartConnect easy** server: It can control not only doors fitted with **SmartConnect door**, but also other doors with motorised locks, electric strikes or electronic cylinders, as well as garage doors, lights, roller shutters, etc.
- **SmartConnect door** also allows individual user management with time profiles, door mode monitoring and logging of all events.
- This SmartHome system has been designed under stringent security measures: highly secure encryption mechanism and no use of cloud service for access control.

### Market launch

From fourth quarter of 2019.
